SOUND ISOLATING™ EARPHONES

1 Sound Isolating Sleeve

A selection of foam and flex sleeves block out background noise, providing a personalized fit.

2 Damper

This acoustically-engineered filter is designed to shape the frequency response.

3 Nozzle

The angle of this cylinder ensures efficient audio delivery.

4 Internal Crossover

Routes higher frequencies to a dedicated tweeter and lower frequencies to dedicated woofers, providing clarity across the frequency spectrum.

5 Tweeter

A balanced armature driver that enhances clarity and definition through the mid-range and high frequencies.

6 Woofers

Dedicated dual balanced armature drivers provide distortion-free, full-bodied bass.

7 Exterior Shell

Offering an ergonomic and stylish design, the earphone housing is coated through a process of vacuum metalized deposition for high shine and durability.

8 Earphone Cord

Worn comfortably over the ear, the cable is strengthened with Kevlar to ensure against a shorted signal.
